EDUCATION

Bharathidasan University, Trichy
MSc Bioinformatics (Integrated)
2017 - 2022
CGPA: 7.82 /10

TECHNICAL SKILLS

- Languages:** Python, R, SQL
- Frameworks:** Django, Django REST Framework
- Databases:** PostgreSQL, SQLite
- Frontend:** HTML, CSS, Tailwind CSS (basic)
- NGS Analysis:** Cutadapt, HISAT2, Cufflinks
- Sequencing Platforms:** Illumina, PacBio, ONT
- Tools:** Git, GitLab, Postman, RStudio
- OS / Shell:** Linux, Bash scripting
- Other:** Web scraping, REST API design
- Soft Skills:** Quick learner, Detail-oriented, Analytical thinking

AREA OF INTEREST

- Backend web development with Python and Django, particularly API design and database optimisation.

SUMMARY

Python and Django developer with ~3 years of experience building scalable backend systems, RESTful APIs, and data-driven web applications. Strong foundation in Bioinformatics, enabling effective development of scientific and data-centric software by bridging biological concepts with engineering solutions. Passionate about writing clean, maintainable, and efficient code, with a focus on performance optimization and robust system design. Proactive and ownership-driven, with a track record of delivering end-to-end solutions from API development to genomic data analysis.

WORK EXPERIENCE

Python Developer

July 2023 - Present

Chadura Tech

Bengaluru, Karnataka, India. On-site

- Currently developing a Django-based bioinformatics tool that simplifies advanced sequence analysis workflows for researchers.
- Built and maintained RESTful APIs using Django REST Framework, handling authentication, data serialisation, and third-party integrations.
- Developed a bulk email management system with Django, supporting scheduled campaigns, template management, and delivery tracking.
- Worked on a CRM platform — improved API response structures and added new view logic to support seamless frontend integration.
- Built web scraping scripts in Python to extract and process article data from various online sources.
- Regularly use Git for version control, following branching strategies and code review practices within the team.

Intern

Sep 2022 - July 2023

Genix.ai

Bengaluru, Karnataka, India. On-site

- Performed data analysis using various Bioinformatics tools and workflows.
- Developed web pages using HTML, CSS, Python, and R for data presentation and interaction.
- Built web applications using Django following MVC architecture principles
- Utilized Git for version control and collaborative code management.

ACADEMIC PROJECT

RNA Sequencing Analysis – *Klebsiella pneumoniae*

- Performed end-to-end RNA-seq analysis on *Klebsiella pneumoniae* samples using Cutadapt (trimming), HISAT2 (alignment), and Cufflinks (expression quantification).
- Conducted whole exome analysis for rare disease samples to identify SNP variants using standard bioinformatics pipelines.
- Visualised and interpreted results in RStudio; prepared a written report covering methodology and findings.
